

Clinically Useful Outcome Measures

SSA Annual Conference, York, 14th November 2008

Duncan Raistrick
Leeds Addiction Unit

SHOCK CLAIM BY DRUG EXPERTS

By SEAN STOWELL

BEER-SWILLING is more likely to result in violence and sexual harassment than the drinking of the drug. A Leeds concept was told.

The dementia timebomb facing binge drinkers

...so not as easy as asking people how much they drink or what drugs they take?

- Is it how much (quantity) or how often (frequency) that matters?
- Is it the range of substances used or just the presenting main substance that should be the outcome?
- Does substance use itself matter? what about the related harms?
- When is a good time to measure outcomes?
- How should outcomes data be presented? who should get the outcome measures?
- Are physical health measures and mortality to be ignored?

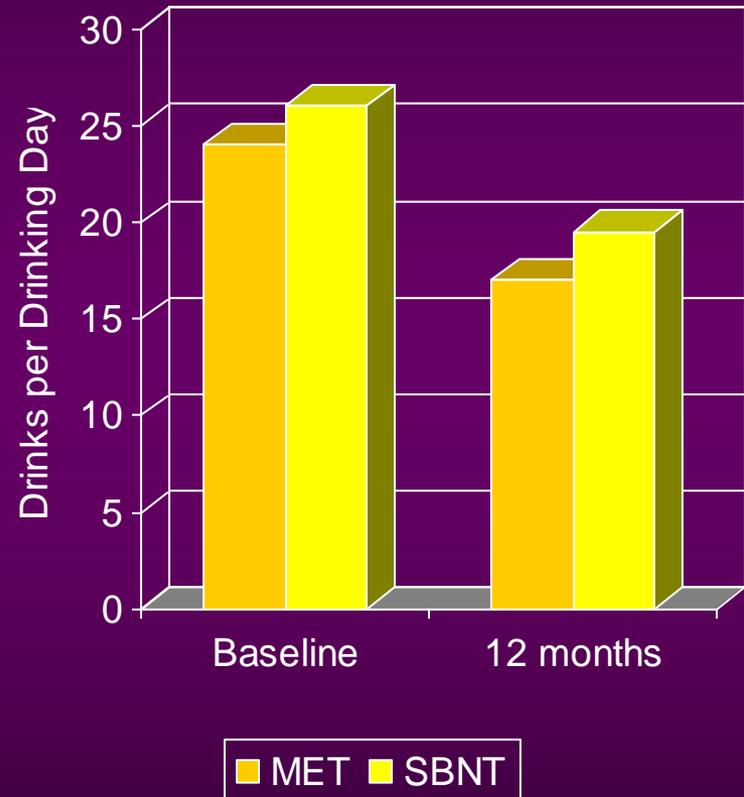

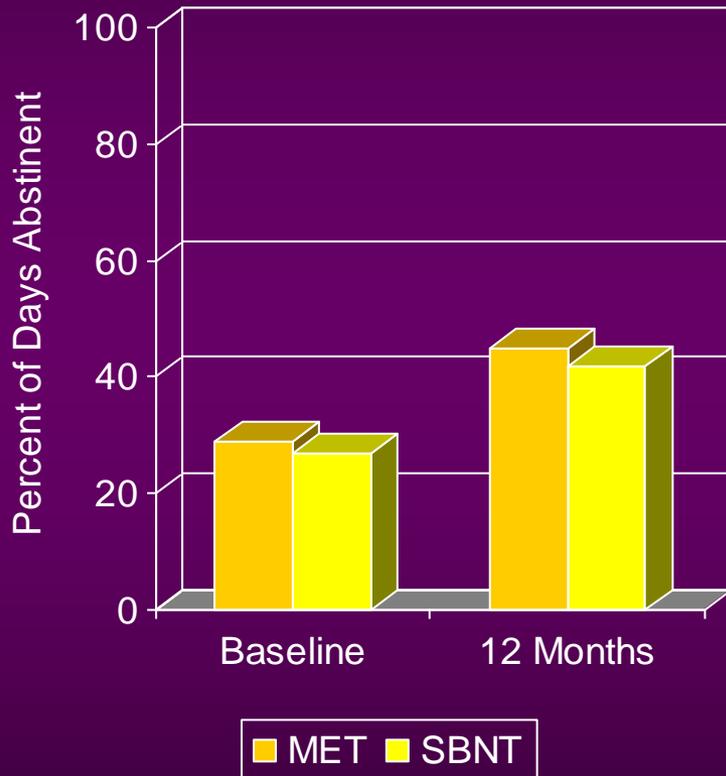

.....problems of the substance itself as an outcome measure.....

- people in treatment typically use and misuse a variety of substances and move in and out of problem use
- it is difficult to compare the harmfulness of different classes of drugs and even different drugs within a class
- some harms are clearly attributable to particular substances some much less so
- prescribed medications may be misused or be part of the substance use profile of an individual
- some drugs are associated with more harmful routes of administration than others

.....solutions to using the substance itself as an outcome measure.....

- adopt a profiling method to provide detail 
too time consuming, costly, and difficult to interpret
- disregard substance use from the outcomes profile 
not intuitive or politically acceptable
- standardise outcome of initial problem drug 
for alcohol %days abstinent and drinks per drinking day
- use a categorical method of describing substance use 
ICD-10 codes work well and are not substance specific

UK Alcohol Treatment Trial

leeds addiction unit

Source: UKATT Research Team, BMJ (2005)

ICD-10 Categorical Outcome Measures

F1x.20 Currently abstinent

F1x.21 Currently abstinent. but in a protected environment

F1x.22 Currently on a clinically supervised maintenance or replacement regime (controlled dependence)

F1x.23 Currently abstinent, but receiving treatment with aversive or blocking drugs

F1x.24 Currently using the substance (active dependence)

F1x.25 Continuous use.

F1x.26 Episodic use (dipsomania)

Substance specific codes are F10 to F19

What would make a good general purpose outcomes package?

- Easy to collect the data. Max 10mins of service user time.
- A selection of measures that are relatively independent of each other and adequately reflect aspects of life.
- Measures must be of universal applicability.
- Ratings should be made by the service user or someone independent of the treatment team.
- Self completion measures must be written in plain english.
- Rating scales must have adequate psychometric properties and preferably published population norms.

any general package can be enhanced better to meet the needs of a particular agency, or specialist function, or political expedience

.....from these principles **RESULT** was developed as an outcomes package.....

Dependence domain: Leeds Dependence Questionnaire

Raistrick, D, Bradshaw, J., Tober, G., Weiner, J., Allison, J. & Healey, C., (1994). Development of the Leeds Dependence Questionnaire. *Addiction*, 89, 563–572.

Psychological domain: Clinical Outcomes Routine Evaluation

Evans, C., Connell, J., Barkham, M., Margison, F., McGrath, G., Mellor-Clark, J., et al. (2002). Towards a standardised brief outcome measure: Psychometric properties and utility of the CORE-OM. *British Journal of Psychiatry*, 180, 51–60.

Social domain: Social Satisfaction Questionnaire

Raistrick, D., Tober, G., Heather, N. and Clark, J. (2007) Validation of the Social Satisfaction Questionnaire in the context of routine outcome evaluation for alcohol and drug problems treatment, *Psychiatric Bulletin*, 333-336

Substance use domain: ICD-10 categorical codes

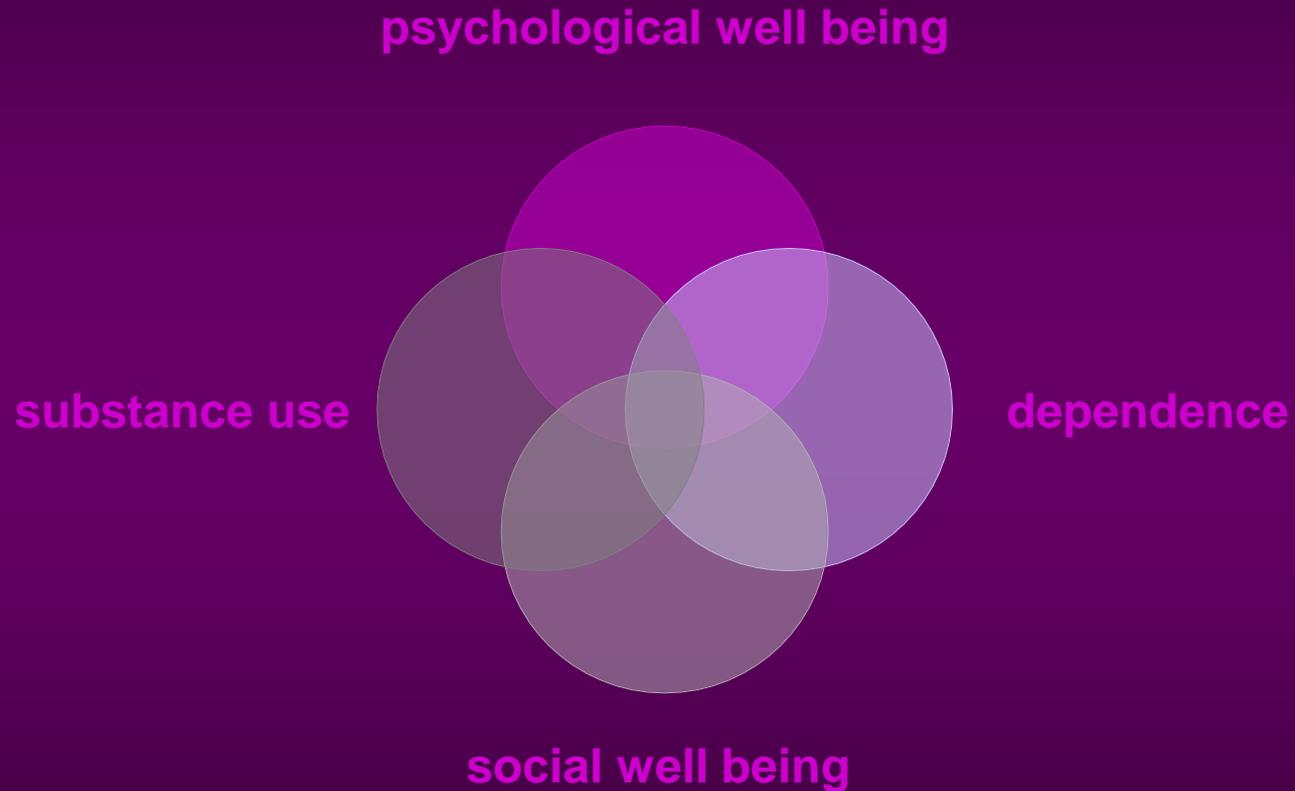

World Health Organization (1993). *International Statistical Classification of Disease and Health-related Problems – ICD-10*. Geneva: World Health Organization

QALY – quality adjusted life years: EQ5D

EuroQol Group (1990) A new facility for the measurement of health-related quality of life. *Health Policy*, 16, 199-208

Snapshot: ICD-10: Freq any misuse: Self rating %

Leeds Dependence Questionnaire

Q2 Is drinking or taking drugs more important than anything else you might do during the day?

Q7 Do you feel you have to carry on drinking or taking drugs once you have started?

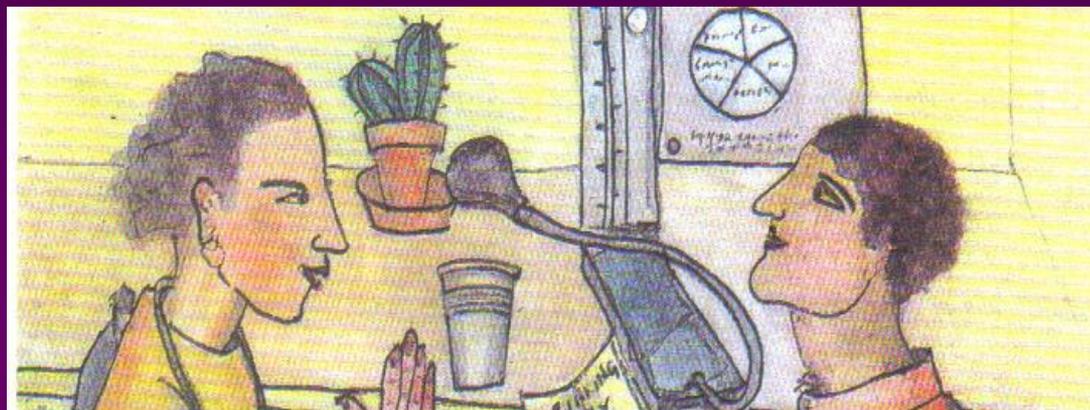

Clinical Outcomes in Routine Evaluation

Q6 I made plans to end my life

Clinical Outcomes in Routine Evaluation

Q7 I have had difficulty getting to sleep or staying asleep

Social Satisfaction Questionnaire

Q1 How satisfied are you with your accommodation?

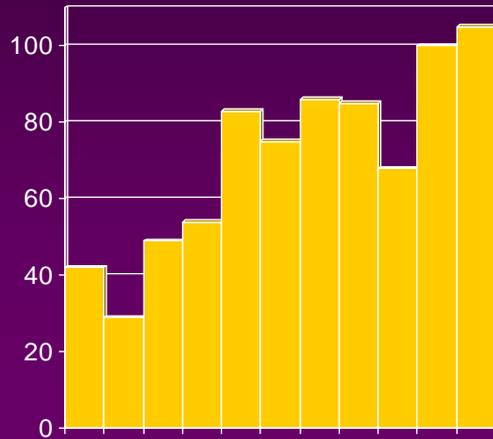

Q6 How satisfied are you with your closest relationship in life (eg. spouse, partner, lover, parent, best friend) ?

T- test Baseline and 3mth Means

	n=	mean	95% CI	Sig. p<

Clinically Significant Change

Jacobson et al. (1999) proposed that in order to take account of baseline scores and measuring error clinically significant change should a) be statistically reliable b) end scores be in a normal population range.

	early changers: assessment to 3mth		late changers: 3mth to 12mth	
	Heroin n=59	Alcohol n=39	Heroin n=60	Alcohol n=40
statistically reliable change	52.5%	48.7%	35.0%	27.5%
clinically significant change	33.9%	28.2%	26.7%	20.0%

no statistically significant change differences between heroin and alcohol

Treatment Outcomes Profile

Name of client: _____ / _____ / _____ D.O.B. (dd/mm/yyyy) Name of keyworker: _____
 Gender: M F Treatment stage: Modality start Care plan review
 TOP interview date (dd/mm/yyyy) Discharge Post-discharge

Section 1: Substance use

Record the average amount on a using day and number of days substances used in each of past four weeks

	Average	Week 4	Week 3	Week 2	Week 1	Total
a Alcohol	<input type="text"/> units/day	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
b Opiates	<input type="text"/> g/day	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
c Crack	<input type="text"/> g/day	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
d Cocaine	<input type="text"/> g/day	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
e Amphetamines	<input type="text"/> g/day	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
f Cannabis	<input type="text"/> spliff/day	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
g Other problem substance?	<input type="text"/> g/day	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28

Name: _____

Section 2: Injecting risk behaviour

Record number of days client injected non-prescribed drugs in past four weeks (if no, enter zero and go to section 3)

	Week 4	Week 3	Week 2	Week 1	Total
a Injected	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
b Inject with needle or syringe used by someone else?	Yes <input type="checkbox"/> No <input type="checkbox"/>				<input type="text"/> Enter 'Y' if any yes, otherwise 'N'
c Inject using a spoon, water or filter used by someone else?	Yes <input type="checkbox"/> No <input type="checkbox"/>				

Section 3: Crime

Record days of shoplifting, drug selling and other categories committed in past four weeks

	Week 4	Week 3	Week 2	Week 1	Total
a Shoplifting	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
b Drug selling	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
c Theft from or of a vehicle	Yes <input type="checkbox"/> No <input type="checkbox"/>				<input type="text"/> Enter 'Y' if any yes, otherwise 'N'
d Other property theft or burglary	Yes <input type="checkbox"/> No <input type="checkbox"/>				
e Fraud, forgery and handling stolen goods	Yes <input type="checkbox"/> No <input type="checkbox"/>				<input type="text"/> Enter 'Y' or 'N'
f Committing assault or violence	Yes <input type="checkbox"/> No <input type="checkbox"/>				

Section 4: Health and social functioning

a Client's rating of psychological health status (anxiety, depression and problem emotions and feelings)

0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 **Good** 0-20

Record days worked and at college or school for the past four weeks

	Week 4	Week 3	Week 2	Week 1	Total
b Days paid work	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28
c Days attended college or school	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-7	<input type="text"/> 0-28

d Client's rating of physical health status (extent of physical symptoms and bothered by illness)

0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 **Good** 0-20

Record accommodation items for the past four weeks

e Acute housing problem	Yes <input type="checkbox"/> No <input type="checkbox"/>	<input type="text"/> Enter 'Y' or 'N'
f At risk of eviction	Yes <input type="checkbox"/> No <input type="checkbox"/>	<input type="text"/> Enter 'Y' or 'N'

g Client's rating of overall quality of life (e.g. able to enjoy life, gets on well with family and partner)

0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 **Good** 0-20

- Use of TOP imposed including exception reporting
- Sections are not single constructs so items stand alone
- Item selection is unbalanced
 - a) 3/7 stimulant drugs
 - b) 2 injecting
 - c) 4 criminal justice
 - d) 2 housing
- Items are of limited motivational value
- Scales of 0-20 are unusual
- Scales duplicate each other
- 3mth completion frequency is unnecessary
- Narrow completion time window

Concluding Remarks

- RESULT is a package of existing scales that have demonstrable clinical usefulness and published psychometric properties
- Evidence supports collecting outcomes data on an intention to treat basis at 3mth, 12mth and then annually
- Self report is useful and probably adequate as a means of estimating treatment outcomes, **but ...**
 - a) more research is needed to demonstrate the link between these outcomes and actual health or social gains
 - b) more research is needed to determine the key variables to profile different substance misuse populations
